

Experiment: Library Book Reservation System

1, Create a simple cloud software application for Library book reservation system for SIMATS library using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Title of the book, author, publications, Year, edition, no of copies, Rack no, status (taken/returned) etc.

Aim

To develop a cloud-based Library Book Reservation System for managing book details, member information, and book reservations. The system enables members to reserve books easily and helps maintain library records efficiently.

Procedure

1. Create a new application named **Library Book Reservation System**.
2. Create **Member Details**, **Book Details**, and **Book Reservation** forms.
3. Add fields such as member name, book title, author, ISBN, reservation date, return date, availability status, and reservation status.
4. Use **Lookup** fields to connect the Member and Book forms.
5. Create reports to display available books, reserved books, and member reservation history.
6. Test the application by reserving books, updating return status, and cancelling reservations.
7. Publish the application and verify that all reservation records are stored and retrieved successfully.
