

Experiment: SIMATS Hospital Management System

Create a simple cloud software application for Hospital information system for SIMATS Hospital using any Cloud Service Provider to demonstrate SaaS with fields of patient name, age, address, phone, email, Attender name, attender phone, doctor name, diseases, etc.

Aim

To develop a cloud-based **SIMATS Hospital Management System** for managing patient details, doctor information, appointments, and medical records.

The system helps improve hospital administration, streamline patient care, and maintain hospital records efficiently.

Procedure

1. Create a new application named **SIMATS Hospital Management System**.
2. Create **Patient Details**, **Doctor Details**, and **Appointment** forms.
3. Add fields such as Patient ID, Patient Name, Age, Gender, Doctor Name, Department, Appointment Date, Diagnosis, Treatment, and Bill Amount.
4. Use **Lookup** fields to connect the Patient Details and Doctor Details forms.
5. Create reports to display patient records, doctor schedules, appointment history, and billing details.
6. Test the application by registering patients, scheduling appointments, updating medical records, and generating reports.
7. Publish the application and verify that all hospital records are stored and retrieved successfully.
